

# Planned Power Outage Procedure

Prior to a planned power outage, COUPP personnel may contact you to close valve MV-4 by turning the associated round black-handled knob. MV-4 is located beneath and behind the AC-1 accumulator tank. It has a capillary tube going to it.

After the power is restored, COUPP personnel will contact you to reopen the valve.

Location of MV-4

## Contact:

Mike Crisler cell: [\(630\) 276-8705](tel:6302768705), work: [\(630\) 840-4099](tel:6308404099)

Jeter Hall cell: [\(801\) 735-7433](tel:8017357433), work: [\(630\) 840-6660](tel:6308406660)
